

How much is the [AI] going to change the way we use e-mail?

Current [AI] capabilities

- ✓ 90% of human writing precision
- ✓ Mood and sentiment recognition
- ✓ Complex idea forming abilities

1

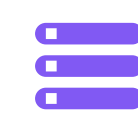

[Research]

Research was conducted on the latest knowledge of the most advanced [AI] named GPT-3.

Real world potential

User can spend more time on forming ideas,

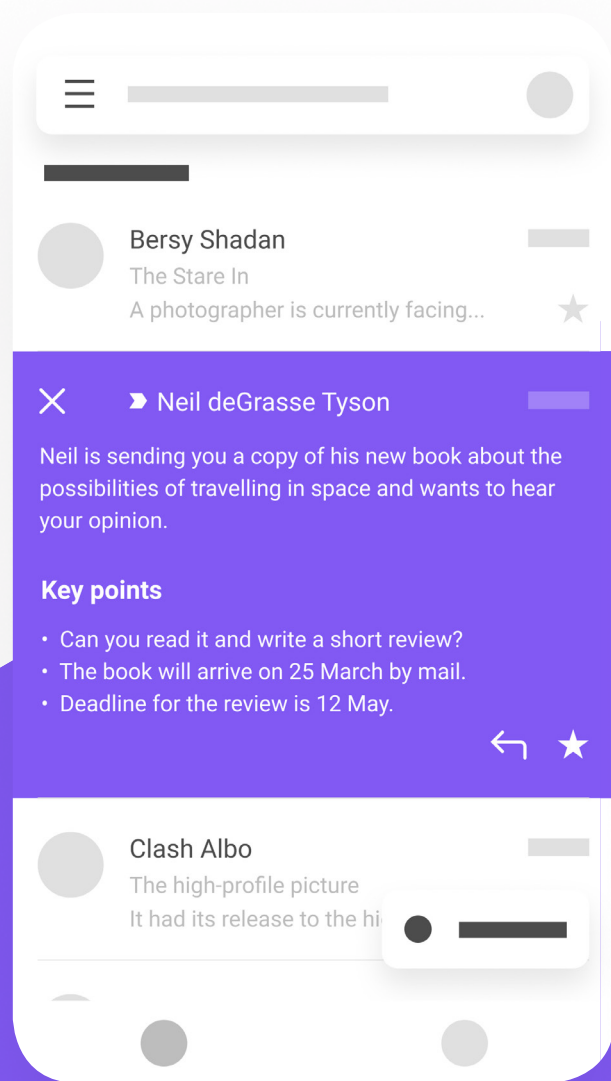

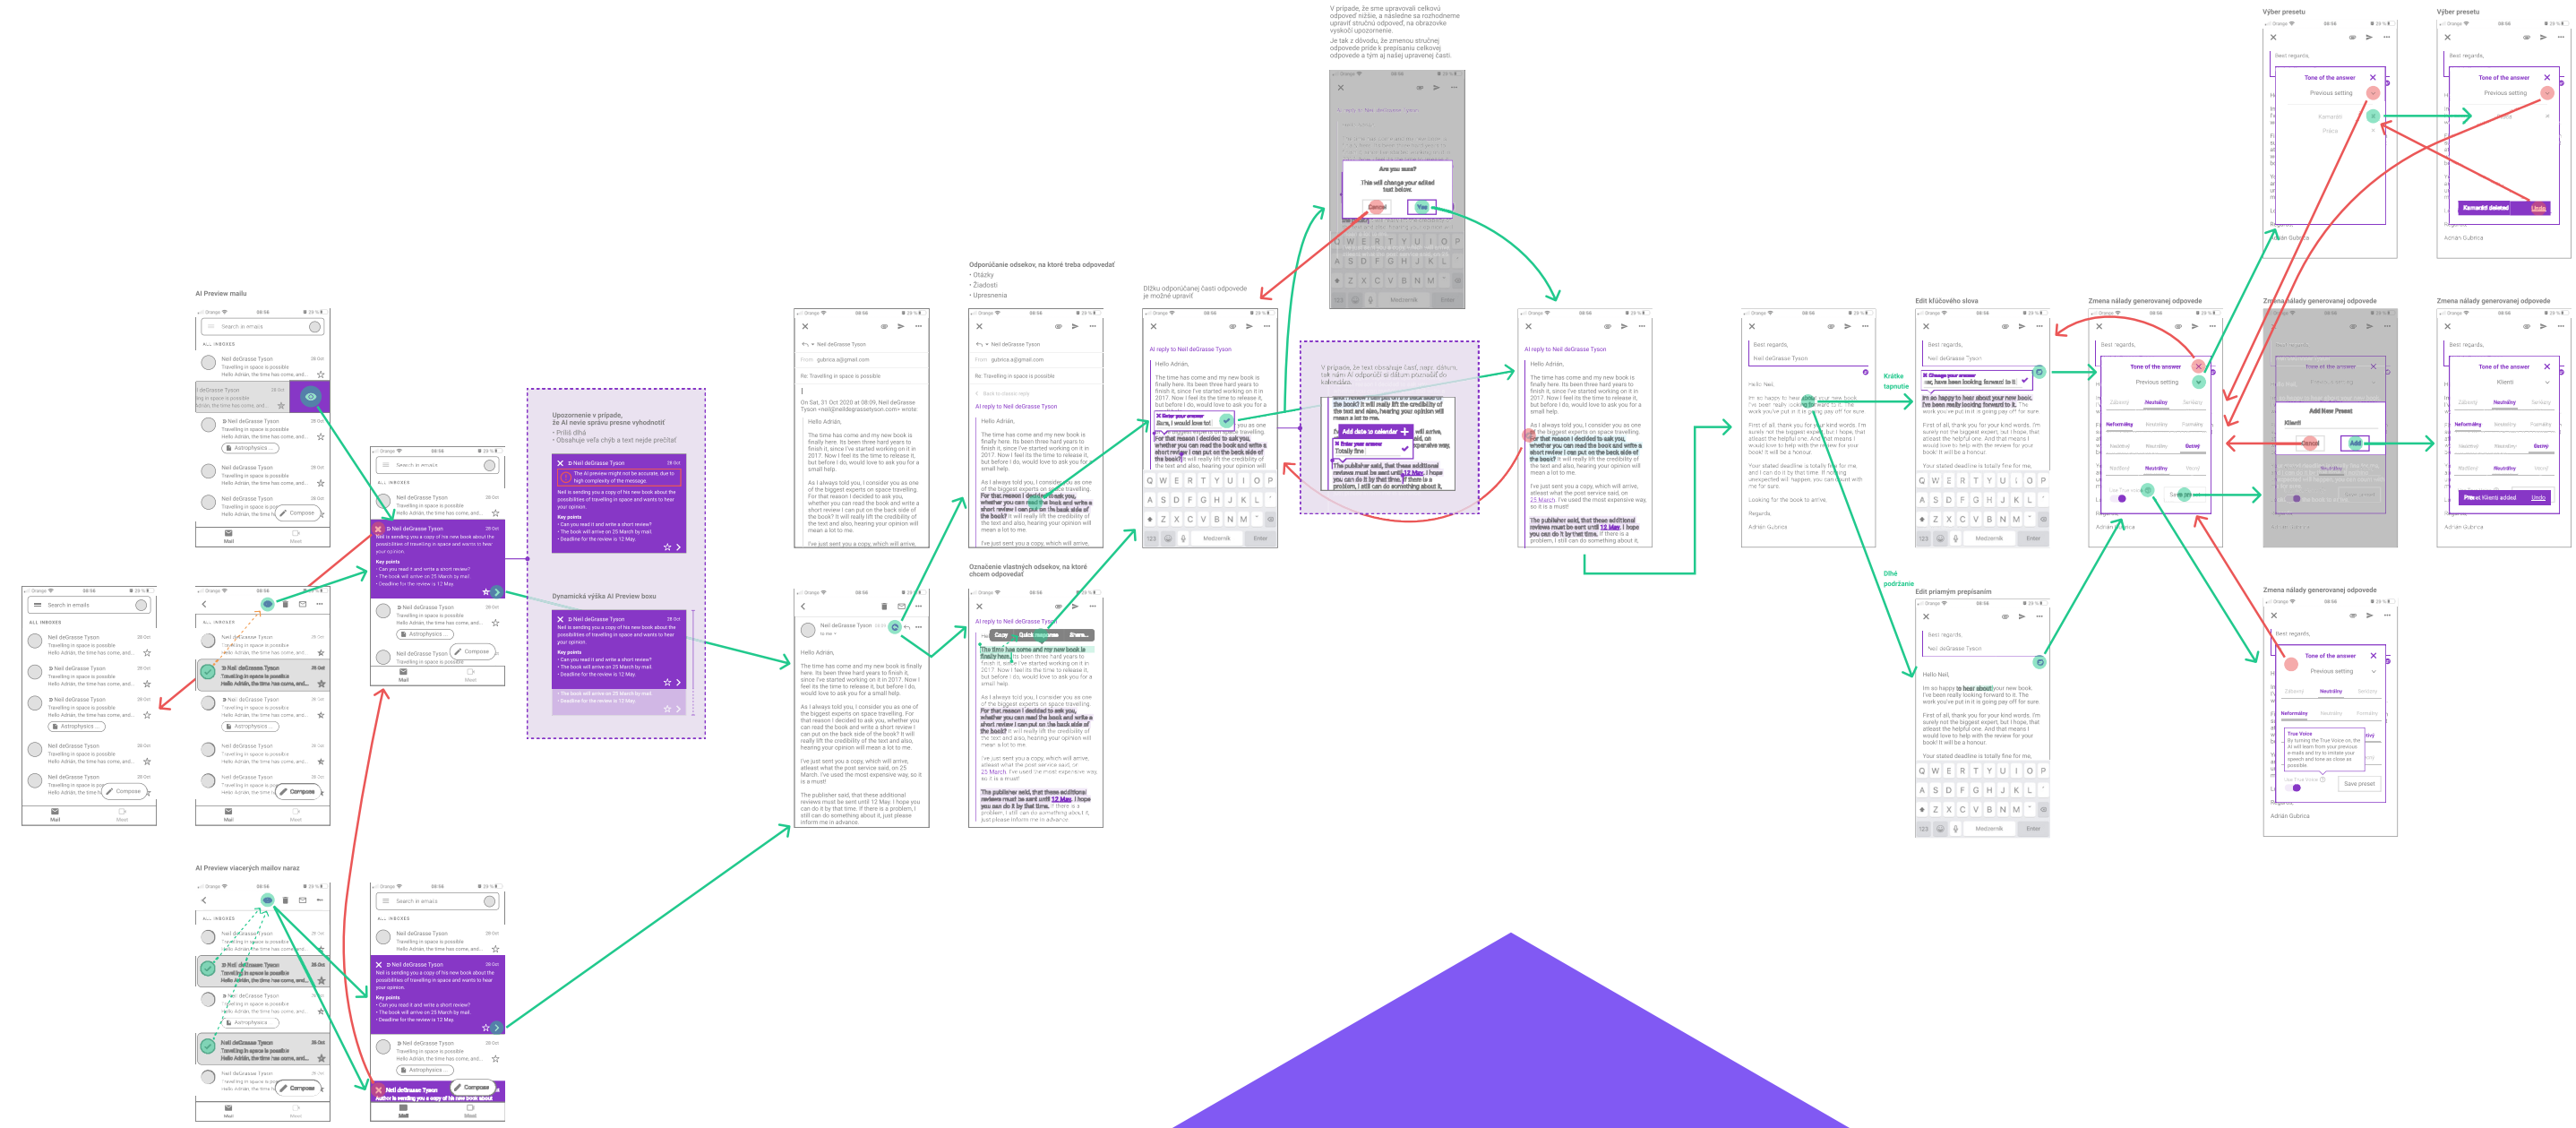

while [AI] can quickly form the ideas into a precise text.

2

[Integration]

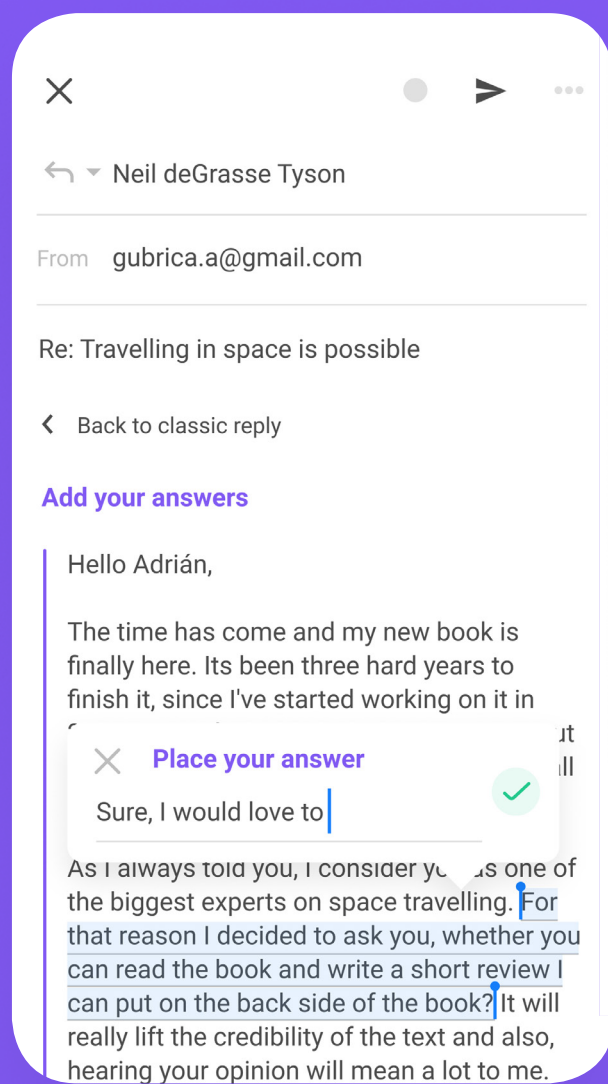

Each part of AI was precisely integrated into e-mail app by using the wireflow technique.

A

Quick E-mail Preview

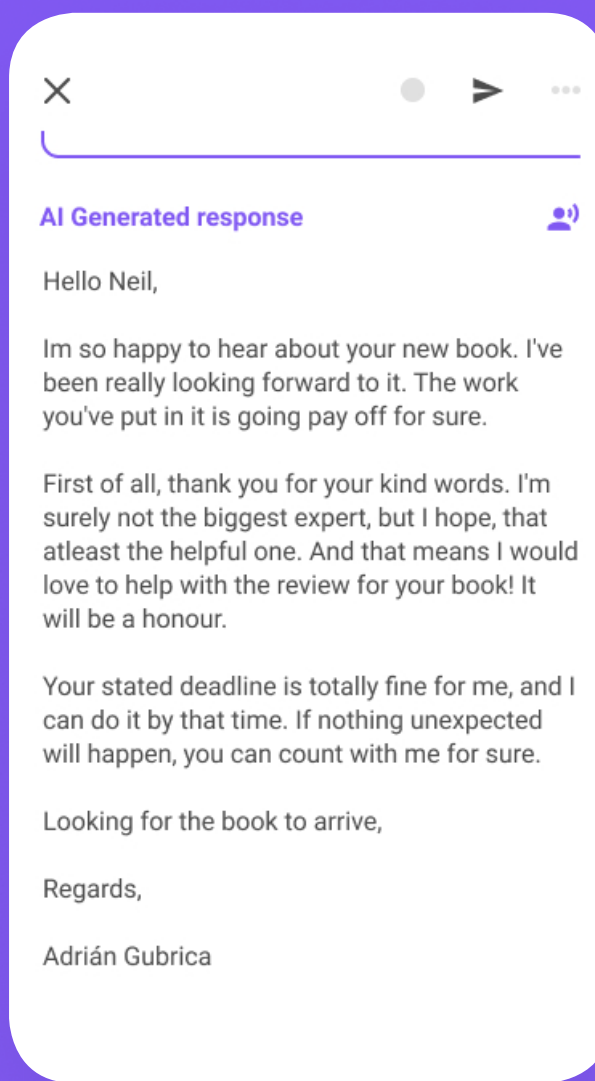

Activating the function, AI generates a short preview of the e-mail and highlights the key points.

B

Less Writing

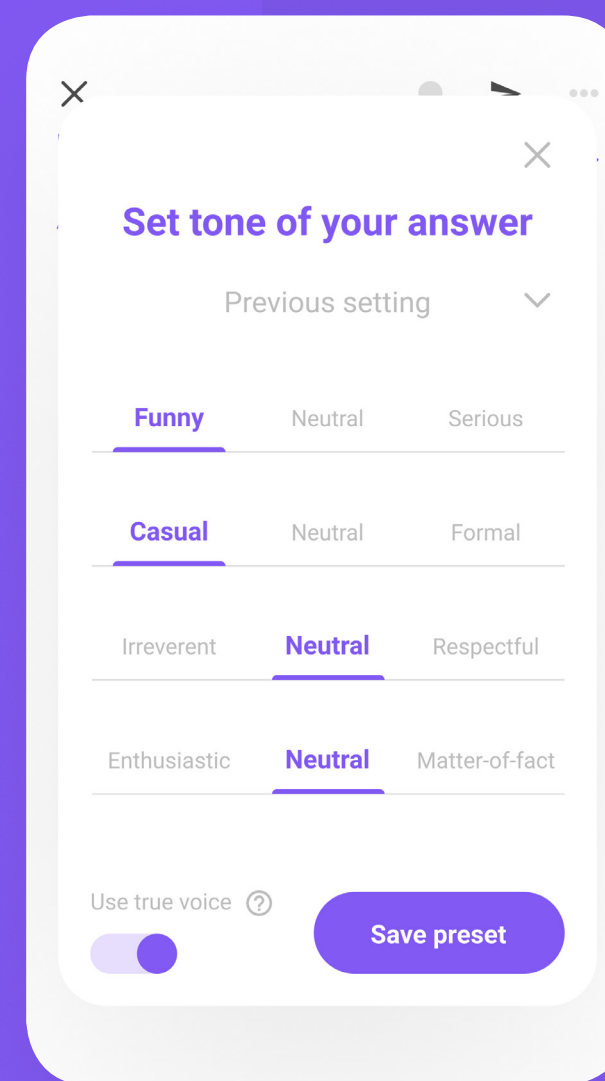

User directly answers to selected parts of the message.

C

AI Generated Response

AI the direct answers and generates a full response.

D

Adjustable Tone of Answer

User can adjust the tone parameters and save them as presets. True voice can be activated to let AI learn from users previous messages.

Tone parameters from ngroup.com

3

[Design]

Designed with emphasis on readability and clarity to support user experience in fast e-mail environment
