

**Up to 90% of electronic waste  
can be recycled,  
but now only less than 18%  
is recycled**

**Please recycle e-waste  
and this number comes true**

#### E-waste

Term that means waste created by electronics and electronic parts. This waste presents a risk to the environment, mainly due to the content of hazardous substances and rare metals, which can be recycled and reused for production of new electrical appliances. By recycling of the old electronics we can achieve a cleaner environment and even lower costs of production the electronics.
